

# Codecell Event Report

## Panel Session

**Date:** 14th August, 2018

**Time:** 4:45 PM - 7:30 PM

**Venue:** B - 113

**Total Participants:** 150 students (FY-TY, All branches)

The panel session was held in order to help students solve their doubts and bust some of the myths related to common topics in the field of computer science. The objective of the panel session was also to provide help and guidance to students wanting to explore new fields.

Our panelists were:-

1. Yash Nisar - Double GSOCer , Google CodeIn Mentor ,an Open Source enthusiast, and a KJSCE Alumni.
2. Chirag Jain - Hackathon enthusiast and ML Researcher Engineer at Haptik.
3. Gaurav Sen - Competitive Programmer , Youtuber and Platform Engineer at Directi.

The panel session was started by giving an introduction to the students about KJSCE Codecell, our achievements, objectives and goals. We then introduced our panelists and commenced the panel session. Our moderator, Shivam Pawase, asked questions from a list that had been curated by the council after going through the all the questions that the students asked in the google forms we'd asked them to submit while RSVPing to our event.

The [questions](#) were of two types:

1. General questions - that all the panelists could answer
2. Field specific - related to the field a panelist belonged to.

After we'd exhausted the list of questions that we'd created, the floor was opened to the audience so that they could ask their doubts to the panelists. The panelists' were very courteous and their answers were very helpful and threw light on a lot of topics that the students had doubts about. The students asked their questions and each panelist was given a chance to give his opinion regarding the question.

The panel session ended with a vote of thanks and the panelists were given a letter of appreciation and a memento, to thank them for taking out the time to come to our event, to answer the questions that the students had.
