Codecell Event Report

Workshop on STL containers in C++, Java and Python

Date: 30th and 31st July, 2018

Time: 5:15 PM - 7:30 PM

Venue: B - 215, 216, 217, 315, 316

Total Participants:

      Day 1: 65(SY-LY, All branches)

      Day 2: 31(SY-LY, All branches)

Standard Template Library is a tool every programmer should know in order to make the best use of the resources provided to them by their preferred programming language. It also makes their code shorter, more efficient and optimized. In this workshop, we taught the students some basic containers of STL, in all three languages, which will help them extensively in solving programming questions in various programming contests. It was a hands-on workshop where students were guided through solving three problems on codechef. The solutions to these problems and the reference material for the workshop, can be referred by the students on our github repository for this workshop.
